Home Performance With ENERGY STAR® Program
Can Help You Lower Your Energy Bills And Make
Your Home Safer And More Comfortable

- The Homeowner Financing Incentive (HFI)**
This is a 10% cash back incentive on the total cost of qualified measures. Anyone that pays for a project by their own means, without lending from the program, is eligible to receive this incentive.
- The ENERGY STAR® Loan**
This is an unsecured loan through Energy Finance Solutions at the current rate. The loan is for eligible customers with no bankruptcies over the past 7 years with satisfactory credit. The loan is customizable in 3,5,7, and 10 year notes and can be as large as \$20,000. Also, there is no penalty for early repayment. However, the Loan cannot be combined with the HFI.
- The New York Energy \$martSM Loan Fund**
The NY Energy \$martSM Loan Fund is a simple, low-cost way to finance energy-efficient and renewable technology projects for individual use. The program provides an interest rate reduction off of a Participating Lender/Lessor's normal interest rate for a term up to 10 years. The interest rate reduction for most of the State is up to 4.0% (400 basis points).
- The Assisted Home Performance Subsidy**
This is a subsidy given to eligible homeowners that will pay for 50% of the proposed eligible measures up to a maximum award of \$5,000. The customer is then responsible for paying whatever balance remains. This is a subsidy for income-eligible homeowners or renters. One great feature of this incentive is that The Assisted Home Performance Subsidy can be combined with the ENERGY STAR® Loan or the NY Energy \$martSM Loan Fund. This loan cannot be combined with the Homeowner Financing Incentive (HFI).

Think Cleaner, Think Greener... Think ZERODRAFT

Home Performance With ENERGY STAR® Program
Can Help You Lower Your Energy Bills And Make
Your Home Safer And More Comfortable

Our Services Include:

- ⊕ Insulation
- ⊕ Air Sealing
- ⊕ HVAC
- ⊕ Windows & Doors
- ⊕ Infrared Imaging
- ⊕ Whole House Assessments

Insulation & Air Sealing

Your parents always yelled about not heating the outside and they had a point! When warm and cool air escapes, your HVAC equipment must work harder, causing your bills to go sky high. Since heat flows from warm to cold in the winter, your windows and doors are a silent escape hatch that can cost you a fortune. Ice build-up can also occur causing costly roof, ceiling and pipe damage. Of course, in the summer it's your air conditioning that is escaping your home. This means you are losing money every second, year round.

ZERODRAFT will help you keep a lid on your home and make sure it's airtight. We use state-of-the-art products installed by highly trained, certified technicians. Plus, every product we use is environmentally friendly and completely safe when properly installed! Here's our process: we examine your home, find the problem and fix it, it's pretty simple.

HVAC (Heating/Ventilation/Cooling)

As energy costs continue to rise, it is important to find ways to save money and become more efficient with your heating system and hot water tanks. At ZERODRAFT, along with our experienced partners, keep your home comfortable with the finest HVAC and hot water systems. We use advanced analysis equipment to gain objective and accurate readings about the efficiency and safety of your current system in order to make sure we install the right system that fits the need of your home.

Windows & Doors

We all enjoy a refreshing breeze from time to time, but you don't want to feel that same breeze coming through your closed window! Don't let drafty windows and doors steal your money! At ZERODRAFT, we stress the importance of using energy efficient and durable products.

Our highly skilled staff uses superior products, and takes extra time to properly air seal each window. We use top brand products along with the highest quality spray foam insulation to ensure a proper seal. For our exterior doors, we use a variety of reputable suppliers, and of course, we will customize them to fit your style, budget and existing frame.

Infrared Imaging

Are you always cold no matter how high you turn up your heat? Your house may be leaking, which means your hard earned money and comfort are most likely blowing right out of your home!

ZERODRAFT can help! Our infrared imaging camera will identify where your air leak is coming from. This special technology allows us to locate all of the areas in your home that are costing you a fortune. The images use color and heat sensors to determine exactly where the heat loss is coming from. Our infrared imaging services allow us to focus on treatments and use the highest quality products to close all of the gaps and seams in your home.

Whole House Energy Assessment

The Comprehensive Home Assessment is a detailed process performed by our highly-trained and continually re-certified Building Analysts giving the homeowner an in depth idea of the building composition, surface R-value, electrical usage, heating and fuel usage, and overall building shell leakage.

The Comprehensive Home Assessment is also a critical Health and Safety tool that is vital in any Home Performance project. A full combustion safety workup is performed on the home including combustion appliance draft testing, efficiency analysis, carbon monoxide testing and perimeter gas leak detection.

After this, our Building Analysts will perform building envelope air-leakage testing using advanced blower door pressure diagnostics to determine an exact measure of the air-leakage of the home. This test is typically performed before and after any home performance project so that the effects of our work can be quantified in a measureable air-leakage reduction.

Using data from your utility company, the information gathered in the assessment, and state-of-the-art residential energy analysis software, ZERODRAFT can produce a comprehensive report of your home's energy usage as well as proposed improvements to existing conditions. With these tools, we can build a performance package tailored to your specific needs and provide you with a reliable estimate on how much money (in energy savings) the proposals will save you each year. Most of our comprehensive air sealing and insulation packages pay for themselves in less than ten years.

Dear ZERODRAFT,

I want to thank you for the work done at my home. Your crew was extremely polite, professional and hard working. It was a pleasure to have them here! This also holds true for your salesman, I found him extremely honest and not high pressured.

Thank you.
Marie
